Open NYC dataset

The name of the dataset is NYC Wi-Fi Hotspot Locations. The link to the dataset is [NYC Wi-Fi Hotspot Locations](https://data.cityofnewyork.us/City-Government/NYC-Wi-Fi-Hotspot-Locations/yjub-udmw)

(<https://data.cityofnewyork.us/City-Government/NYC-Wi-Fi-Hotspot-Locations/yjub-udmw>).

The dataset has 3,319 rows, and 29 columns.

This dataset has both the longitude and latitude of the hotspot kiosks, the name of the location where it is located, what borough it is in, Borough block lot, the council district, Neighborhood tabulation area code, building id

Some of the secondary variables are the type (free/paid) of kiosk, who provides the internet for that kiosk, when the kiosk went active, the SSID of the hotspot, 2010 census data about the hotspot, random remarks about the hotspot, what type of location the hotspot is in, and identification numbers that were generated by GIS developer map sites.

I thought this dataset was interesting because I didn't know there are a lot of free hotspots in NYC, and I found it interesting that they had different providers for them. It could be interesting to see how this relates to the demographic of that area, and it would be really interesting to see if richer areas correlate with internet that is perceived as good.
